

SOFTWARE ENGINEERING STUDENT - WORKER

I am a Software Engineering student at Bahçeşehir University with experience in both front-end and back-end development. I have hands-on experience with PHP and .NET Core architecture and am actively working on projects to enhance my skills. Passionate about building efficient and scalable solutions, I continuously explore new technologies to improve my expertise.

EDUCATION

Bahcesehir University

Software Engineering

2022 - Ongoing(2025)

Sakarya Uygulamalı Bilimler University

Computer Programming

2020 - 2022

WORK EXPERIENCE

Web Developer

BAU BAP

February 2025 - Ongoing(2025)

This project, developed under Bahçeşehir University's BAUBAP program, aims to enhance the shopping experience for visually impaired individuals by providing easy access to product information through audio guidance and location-based navigation. As a web developer, I am responsible for both the frontend and backend, ensuring a seamless and accessible user experience.

- Developed a full-featured web platform, allowing users to access product information and administrators to manage content.
- Implemented authentication and user management to ensure secure access for visually impaired users.
- Designed and integrated the database for efficient storage and retrieval of product details and user interactions.

Software Developer (Part-time)

Siltronics

July 2024 - September 2024

During my internship, I developed a full-stack web application for a company called Silter, designed to streamline all business operations within a single platform (www.siltronics.net).

- Developed a user-friendly management platform for products and companies, enabling easy data viewing, editing, and deletion.
- Implemented authentication, role-based access control, and activity tracking, ensuring secure login/logout functionality, detailed logging, and permission-based user management.
- Designed an admin dashboard for monitoring system activity, managing users, and overseeing platform operations.
- Optimized database design and performance, ensuring efficient data storage, retrieval, and overall system functionality.
- Conducted testing, debugging, and deployment, ensuring full system stability before production release.

Automation Developer (Intern)

Panda

June 2020 - August 2020

- Developed automation scripts: Created basic scripts to automate repetitive tasks in the production process.
- Assisted in system monitoring: Monitored and analyzed system performance to identify inefficiencies.
- Performed hardware and software troubleshooting: Helped resolve minor technical issues to ensure smooth system operations.

SKILLS

- HTML
- CSS
- JAVASCRIPT
- ANGULAR
- C#
- .NET CORE
- PHP
- RESTful API
- SQL
- OOP
- Git

LANGUAGES

- English (C1)
